

Benjamin Berta

CTO · Engineering Lead — Web3 & AI Agents

0xbbjoker@proton.me · github.com/0xbbjoker · linkedin.com/in/berta-benjamin · auto.fun · Remote · Croatia (CET)

PROFILE

Engineering leader with 7+ years building backend, fintech, and crypto systems, and the last two focused on AI agents. As CTO at Autonomous I own the architecture and engineering team for Auto, from zero to production — and still ship a large share of the code myself. Before that I was a core engineer on elizaOS, ranked #11 of 1,800+ contributors on its public leaderboard, owning the database layer and the Knowledge/RAG plugin. I also built and run Orion, a subscription AI coaching product with 600+ active subscribers.

Looking for: Tech lead, engineering manager, or senior engineer roles in web3, AI agents, or both. Remote, long-term. Remote from Croatia (CET), with a good overlap with US East. Long-term, full-time engagements through my registered Croatian company (B2B) — no visa or payroll setup needed. Open to relocating for the right role.

EXPERIENCE

Chief Technology Officer — Autonomous — Auto (auto.fun)

Jan 2026 - present

- Lead engineering at a VC-backed startup building Auto, an AI trading agent that executes trades across crypto, perps, prediction markets, tokenized stocks, and DeFi from natural-language chat.
- Own architecture, roadmap, and delivery for a 3-engineer team — sprint planning, code review, release process, and incident response.
- Took the product from zero to production and 1,700+ users, personally shipping 600+ merged PRs.
- Built the execution layer across 12+ chains and 10+ venues (Hyperliquid, Polymarket, Aave, Morpho, CoW, Jupiter, Enso, Uniswap, Ox), with Privy embedded wallets and gas sponsorship on most chains.
- Hardened reliability: bridge-provider failover, stale-token recovery, position reads, and request fanout; built a Hyperliquid indexer and internal admin tooling for users, agent state, and wallets.

TypeScript, Bun, Convex, React, Next.js, Privy, Redis, Vercel, Solana, EVM, Hyperliquid

Core Engineer — elizaOS (Eliza Labs)

Jan 2025 - Apr 2026

- Ranked #11 of 1,800+ contributors (top 1%) to elizaOS, a widely used open-source AI agent framework — 187 merged PRs and 114 code reviews.
- Owned the database layer: PostgreSQL/PGLite adapters, migrations, and connection handling (#4 contributor in database work).
- Led monorepo modularization, extracting 10+ plugins from core into standalone packages.
- Primary maintainer of the Knowledge/RAG plugin; built MCP integrations, long-term memory, batch embeddings, and Telegram/Discord connectors.
- Shipped release-credited fixes, including CLI secret-leakage prevention.

TypeScript, Bun, Node.js, PostgreSQL, PGLite, MCP SDK, React, RAG, plugin architecture

Co-creator & Lead Engineer — Orion (oriontaraban.ai)

2025 - present

- Architected and run a subscription AI coaching product built on a psychologist-creator's content library — 600+ active subscribers.
- Built the content-to-skill pipeline, progressive memory, goal tracking, safety gating, subscriptions, and Telegram/iMessage delivery.
- Sole engineer: build, operate, and support it in production.

TypeScript, Convex, LLM tool-use, RAG, Telegram, iMessage

Software Engineer — Thentia

Oct 2023 - Nov 2024

- Backend engineer on a regulated SaaS platform used by government licensing bodies.
- Led the migration of legacy PHP services to Node.js/TypeScript, improving performance and maintainability.
- Designed Redis caching and microservice boundaries within a compliance-driven release process.

Node.js, TypeScript, Redis, PHP, microservices

Software Engineer — Barrage

Nov 2020 - Oct 2023

- Built backend services for fintech and crypto products: trading flows, crypto wallet services, authentication/2FA, KYC, and notifications.
- Developed real-time data services and dashboard APIs on Node.js/TypeScript microservices and Next.js.
- Delivered in a Scrum team alongside product and QA, including production support.

Node.js, TypeScript, Next.js, microservices, realtime data

TECHNICAL SKILLS	EDUCATION & CREDENTIALS
Leadership: Architecture ownership, technical roadmap, code review, release & incident process, Scrum delivery Web3: Solana, EVM/L2s, Hyperliquid, Polymarket, Privy wallets, gas sponsorship, Jupiter, Ox, CoW, Enso, Uniswap, Aave, Morpho, bridges, indexers AI / Agents: Agent runtimes, LLM tool-use, MCP, RAG, vector search, memory systems, evals, guardrails Backend: TypeScript, Node.js, Bun, Rust (working), Convex, PostgreSQL, Drizzle, Redis, Hono, REST/GraphQL, Docker Frontend / Ops: React, Next.js, Astro, Tailwind CSS, Vercel, CI/CD, test automation	- Hedera Certified Developer — The Hashgraph Association (2023) - M.Sc. & B.Sc., Electrical & Electronics Engineering — FERIT, Osijek - Croatian (native) · English (professional working proficiency)
