

Senior AI Agent, Workflow Automation, and TypeScript Platform Engineer

I build production-grade AI workflows, agent runtimes, RAG and MCP/tool-use systems, TypeScript backend platforms, and crypto-native execution layers.

CONTRACTOR PROFILE

Production AI agent engineer for operated systems.

Senior AI agent and backend platform engineer with 7+ years of software engineering experience and 2+ years focused on AI agents, RAG, tool-use systems, and agentic workflow automation. Current co-founder at Autonomous, building Auto (auto.fun), an AI-native DeFi execution layer. Previously core developer in one of the largest open-source AI agent ecosystems, contributing agent orchestration, plugin architecture, runtime behavior, MCP integrations, knowledge/RAG, and memory systems.

B2B ENGAGEMENT FIT

Where I create leverage fastest.

Agent workflow delivery

Planning loops, tool routing, MCP servers/clients, RAG, memory, prompt pipelines, evals, guardrails, and human-in-the-loop controls.

Prototype to production

Logging, tracing, retries, timeouts, idempotency, cost controls, queues, admin dashboards, and production debugging.

TypeScript backend platforms

Node.js/Bun services, Convex/Next.js, realtime subscriptions, PostgreSQL, Redis, REST/GraphQL APIs, CI, and deployment workflows.

Crypto-native execution

Solana/EVM wallets, Privy auth, swaps, bridges, Hyperliquid, Polymarket, DeFi data, and execution-provider abstractions.

Recent work.

Co-founder / AI DeFi Execution Engineer

2026-present

Autonomous - Auto (auto.fun)

- Building Auto, an AI-native DeFi execution layer that converts natural-language intent into wallet-aware onchain actions.
- Designed and maintained a production AI-agent runtime with Convex realtime backend, React frontend, Privy-managed wallets, and provider abstractions for swaps, bridges, and market actions.
- Built multi-step execution workflows that combine user intent parsing, wallet state, market data, protocol actions, transaction preparation, and result reporting.
- Integrated and debugged execution/data flows across Polymarket, Hyperliquid, Aave, Morpho, CoW Swap, Jupiter, Enso, and wallet/indexer services.
- Improved production reliability around wallet identity, gas sponsorship, Polymarket position reads, bridge provider failover, stale-token recovery, and request fanout.
- Built/administered backoffice tooling for users, conversations, message processing, scheduled tasks, agent state, logs, and wallet data.

TypeScript, Bun, Convex, React, Next.js, Privy, Redis, Vercel, DeFi APIs, Solana/EVM integrations

Core AI Agent Framework Engineer

Jan 2025-Mar 2026

Eliza Labs / elizaOS

- Core developer on elizaOS, an open-source AI agent framework used across crypto and AI projects; high-volume contributor under @0xbbjoker.
- Worked across the full agent stack: orchestration, plugin architecture, runtime behavior, entity/request context, CLI behavior, logging, and production safety fixes.
- Shipped public fixes credited in elizaOS releases, including CLI secret-leakage prevention and dev-watch rebuild-loop prevention.
- Built and maintained major plugin surfaces including MCP, Knowledge/RAG, Memory, web search, social/channel integrations, and onchain tooling.
- Improved plugin deployment modes, dynamic MCP tool actions, per-user MCP connections, batch embeddings, PDF parsing, long-term memory extraction, adaptive context, and agent workflow reliability.

TypeScript, Bun, Node.js, ElizaOS core, MCP SDK, Vite/React, RAG, memory systems, plugin architecture

Software Engineer

Oct 2023-Nov 2024

Thentia

- Backend engineer on a regulated SaaS platform, focused on Node.js service development and maintainability.
- Led backend development work to refactor legacy PHP code toward Node.js services, improving performance and long-term maintainability.
- Worked with Redis, caching, microservice boundaries, and production backend workflows in a compliance-heavy SaaS environment.

Node.js, TypeScript, Redis, microservices, SaaS backend engineering

Software Engineer

Nov 2020–Oct 2023

Barrage

- Built backend services across fintech and crypto-adjacent systems, with focus on Node.js/TypeScript microservices and real-time data.
- Developed services for trading workflows, authentication, 2FA, KYC, crypto wallet services, notifications, and dashboard-facing APIs.
- Worked across backend and web surfaces using Node.js, Next.js, databases, external APIs, and production support workflows.

Node.js, TypeScript, Next.js, microservices, fintech systems, realtime data

SELECTED PROJECTS AND OPEN SOURCE

Representative systems.

Orion Project

Skills-first AI agent platform with a TypeScript content-to-skill pipeline, Convex state, Telegram/iMessage ingress, safety gating, progressive memory, goal lifecycle tracking, subscriptions, and admin tooling.

Polymarket Indexer

Monorepo with API, workers, test suites, integrity checks, Python data reconstruction pipeline, MCP/plugin surfaces, and production deployment setup.

Agent plugin ecosystems

Knowledge, MCP, Memory, Sourcegraph, EVM, Twitter, Discord and related plugin work, with emphasis on production configuration, runtime isolation, and developer ergonomics.

Earlier web3 systems

Hedera, Ethereum dApps, token swaps, private blockchain systems, wallet connections, trading automation experiments, and smart-contract workflows.

Engagement

B2B contractor, remote, EU timezone. Best fit for AI-agent workflow delivery, TypeScript platform work, and DeFi execution products.

Education

FERIT, Osijek - Bachelor's and Master's degrees in Electrical and Electronics Engineering.
Hedera Certified Developer - The Hashgraph Association, Jan 2023.
Croatian native. English professional working proficiency.

Technical Skills

LANGUAGES

TypeScript, JavaScript, Node.js, Bun, Rust, Solidity

AI / AGENTS

Agent runtimes, multi-step workflows, LLM tool-use, MCP, RAG/knowledge systems, vector/context retrieval, memory systems, prompt pipelines, evals, guardrails

BACKEND / DATA

Convex, Next.js APIs, Hono, PostgreSQL, Drizzle, Redis, Docker, queues, realtime subscriptions, REST/GraphQL APIs

CRYPTO / DEFI

Solana, Anchor, Ethereum/EVM L2s, wallets, Privy, Hyperliquid, Polymarket, Jupiter, Enso, Aave, Morpho, CoW Swap, Raydium

FRONTEND / OPS

React, Next.js, Vite, Tailwind CSS, shadcn-style UI, Vercel, CI/CD, type-checking, test automation
